

Amendments to the Specification**In Title of Invention**

Since claims 11 - 17 were withdrawn from consideration please make the following amendment:

'Paint Roller Frame with Accessories'.

In Abstract

Please, replace the original Abstract by the following short and concise Abstract. The new Abstract contains less than 150 words and does not include wording related to the withdrawn claims:

ABSTRACT

A paint roller frame with a cage assembly rotatably mounted on a shaft portion of the roller frame used with replaceable paint roller sleeves. The roller cage assembly comprises the bearing portion and the outer portion that is removable permitting replacement of a roller sleeve. Each of the two portions has the roller sleeve supporting surface and the annular face. The roller cage portions have mating connection means so that the annular faces are urged against the sleeve core ends. The cage assembly securely retains the roller sleeve and eliminates leakage of paint into the roller sleeve core interior. Paint roller sleeves of various lengths could be used with the same roller frame. A clip-on end wig mounted on the annular outer face effectively paints corners. A paint roller frame hook that allows the roller frame be mounted higher on a grid fastened in a paint bucket.
